

Military Engineer

By: Matthew Bowman

Definition of A Military Engineer

A Military Engineer makes and designs military vehicles to help our military maintain safety, speed, strength, and combat readiness.

A Day In The Life of A Military Engineer

Usually designing vehicles before they create them.

Making sure they can withstand a certain amount of damage.

Creating and building vehicles to the right expectations.

Location of Work, Salary, Type of Education

If you work for a company then you're usually in the United States but if on active duty then in a foreign country.

Full time Military Engineer makes about \$95,000 a year.

A bachelor's degree in a field related to engineering is necessary, as is a high score on the Military-Administered ASVAB
